

RDDS Policy for .versicherung Domain Names

Definitions:

- RDDS** RDDS (Registration Data Directory Services) refers to the full range of services offered by registries and registrars to provide access to domain registration data, e.g. via RDAP, and previously also via Whois.
- RDAP** The Registration Data Access Protocol (RDAP) enables users to access up-to-date registration data.

Policy

1. tldbox GmbH (hereinafter referred to as the “Registry”) provides the public with an RDAP server for RDDS queries relating to .versicherung domains, which can be accessed at “rdap.nic.versicherung”.
2. The Registry may, from time to time as determined at its complete discretion, impose certain limits on the amount of simultaneous and/or consecutive requests.
3. Since the entry into force of the GDPR (General Data Protection Regulation, <https://eur-lex.europa.eu/legal-content/DE/ALL/?uri=celex%3A32016R0679>) and the NIS2 Directive (implemented in Austria as the NIS Act 2026, <https://ris.bka.gv.at/GeltendeFassung.wxe?Abfrage=Bundesnormen&Gesetzesnummer=20013065>) and the relevant ICANN policies, the registrant’s details – provided the registrant is a natural person – and those of any other contacts are, in principle, no longer publicly accessible.

Rules

1. Registrars are required to ensure that the actual Registrant data fields, as required by the Registry, is obtained from the Registrant and Registrar must collect and maintain accurate records of such data.
2. The Registrar shall notify the Registrant that even where a domain name is removed from the root zone, the domain name record, if publicly available, may still appear on the RDAP server for 24 hours.
3. The Registry may any time perform a review of a random sampling of domain names to test the accuracy and completeness of the registrant data. If errors or missing information exists, notice shall be forwarded to the relevant Registrar, who shall be required to address these deficiencies with the relevant Registrants within 21 days.
4. The Registry will comply with all the security, RDDS, and privacy requirements required by ICANN whether in the Consensus or Temporary Policies (as defined in the Registry Agreement). Furthermore, the registry complies with all national legal requirements and regulatory obligations.
5. Registrants shall send any request for changes, updates, and/or corrections regarding their data to the responsible Registrar. The Registrar shall verify and authenticate the request and

make the appropriate changes within 10 days of successful authentication and verification of the request.

6. By submitting a RDAP query, the requestor agrees that he/she will use the information obtained for lawful purposes only and that he/she will at no time now or in the future:
 - a. allow, enable, solicit, and/or encourage the transmission of mass unsolicited commercial advertising or solicitations via direct mail, electronic mail, or by telephone;
 - b. breach any applicable data and privacy protection acts; and
 - c. utilize and/or enable high volume, automated, and/or electronic processes querying the public database.
7. Any and all data provided through the RDAP query is provided "as is" and without any representation and/or warranty as to its accuracy. The Registry shall in no circumstances be responsible and/or be liable for any reliance on any information provided through the RDAP query.
8. Disclosure of contact data is restricted because of Data Protection legislation. The access to contact details for certain Domain Names may therefore be restricted.
9. All copyright in the RDDS information, the RDDS database and any datasets are explicitly reserved for the registry.
10. It is strictly prohibited to combine, collect, and/or compile any information that is obtained from the RDDS service.
